

# EMERGENCY INTEGRAL TEST SWITCH

Spectrum Lighting | infinium

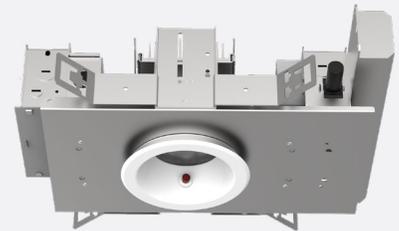

AVAILABLE ON INFINIUM 4" AND 6" ROUND AND SQUARE DOWNLIGHTS

## EMIT

This micro test switch is precision machined into the trim reflector for a clean appearance, providing a more architecturally pleasing aesthetic when compared to a ceiling mounted switch plate.

The standard Emergency Battery processes 7 watts, enabling this fixture series to deliver an average of 800 lumens at 90 minutes.

With our Emergency Integral Test Switch (EMIT) option you get the performance and large array of standard specification options, with the added benefit of an easily accessible, yet discreet emergency switch located in trim.

SPECTRUM EMIT TEST SWITCH CONNECTED YET VISIBLE

TYPICAL DOWNLIGHT WITH SURFACE MOUNTED TEST SWITCH
